

WingCat Series

This Cat has More than Nine Lives.

The WingCat by Wing Inflatables features dual inflatable tubes for optimum lateral stability, light weight, shallow draft and superior load carrying capabilities. Its welded aluminum deck frame can be custom designed for your specific application — including your choice of tiller or console steering.

The optional bow ramp makes loading and off loading everything from ATV's to disaster relief supplies a breeze. The bow ramp also makes

the WingCat easily accessible for the physically challenged.

For cargo transport, swift water

handling, harbor tending or emergency and disaster relief, the WingCat gets the job done.
